

Saroj Kumar Tharu

Full Stack Engineer

 Portfolio  Github  linkedin  sarojc11345@gmail.com  +977-9864919866

 Sanepa, Nepal

PROFILE

Full Stack Engineer specializing in JavaScript (React, Angular, Node.js) and cloud-native architectures (AWS, Docker). Delivered 50%+ efficiency gains and 30%+ user engagement through scalable web apps built with modern tech stacks (Next.js, AWS, Docker).

EXPERIENCE

FULL STACK ENGINEER, QBITZONE

2023 – 2025

Kritipur, Nepal

- Designed and implemented a web portal facilitating UROP and Capstone collaboration, featuring task tracking, document sharing, and role-based access control, enhancing project management efficiency.
- Enhanced user experience with React.js and Next.js, ensuring seamless navigation and responsiveness.
- Achieved a 75% grading improvement and a 50% process efficiency boost for streamlined project monitoring and assessment.

EDUCATION

Bachelor of Engineering in Information Technology, Everest Engineering College

2021 – Present

Affiliated with Pokhara University

Sanepa, Nepal

+2 in Science, BVM Secondary School

2018 – 2020

Kohalpur-15, Nepal

SKILLS

Technical

React.js, Next.js, Angular, Tailwind, Ant Design, Daisy UI, Framer Motion, Node.js, Express.js, NoSQL, SQL, MongoDB, MySQL, Redis, RabbitMQ

Tools

Docker, AWS (EC2, S3), CI/CD, Git/GitHub

ACHIEVEMENTS

Best 6th Semester Project

- Awarded "Best 6th Semester Project" for creating an AI-Driven Melody Generator that used RNN and LSTM to anticipate future melodies based on the melody's historical sequence.

PROJECTS

QBITZONE, Next.js, Firebase, AWS (S3, EC2), CICD Pipeline, Framer Motion, Redux, Ant Design

- Led end-to-end development of responsive agency portal (Next.js, Ant Design) achieving 30% engagement boost via SSR optimization and Framer Motion animations, while implementing Redux for seamless state management.
- Architected secure multi-role system and automated AWS CI/CD pipeline, cutting deployment cycles by 0% and enhancing reliability through Firebase/AWS S3 integration (0% faster load times).

- Drove Agile delivery of SEO-optimized features (dynamic routing, performance tuning) that exceeded client expectations, increasing organic traffic through cross-functional collaboration.

Movie Booking App, *Node.js, MySQL, MongoDB, Docker, RabbitMQ, Sequelize, Mongoose, SQL, NoSQL*

- Implemented secure multi-role access and ORM-based data management (Sequelize, Mongoose), streamlining ticket booking workflows and digital receipt generation across hybrid SQL/NoSQL architecture.
- Architected event-driven communication between Auth/Payment/Reminder services using RabbitMQ, enabling scalable message processing while containerizing the system with Docker for deployment consistency.
- Engineered a Dockerized microservices platform (Node.js, MySQL/MongoDB) with RESTful APIs for ticketing/payment processing, integrating 3 payment gateways (Stripe, Esewa, and Khalti), and reducing missed bookings by 25% using RabbitMQ-powered SMS/email reminders.

GoodReads Clone, *Node.js, Express.js, React.js, TailwindCSS, Daisy UI, Redux, MongoDB, Mongoose ORM, NoSQL*

- Built a full-stack book review platform using MERN stack (Node.js, Express, React, MongoDB) with RESTful APIs, JWT authentication, and Redux for state management, achieving seamless CRUD operations for books/reviews and scalable user interactions.
- Designed responsive UI/UX with TailwindCSS and Daisy UI, implementing GoodReads-like features (rating system, search, and role-based access) that delivered consistent performance across devices.
- Architected modular backend with Mongoose ORM and optimized queries, following Agile practices (Git/GitHub) to ensure clean code structure, robust error handling, and efficient data flow.

Award-Winning AI Melody Generator (6th Semester Project), *Python, Tensorflow, RNN, Custom Datasets*

- Used hyperparameter tuning and model optimisation methodologies to reduce training time by 30% while retaining good accuracy.
- Pioneered unique dataset curation (moved away from generic Chinese datasets), increasing model reliability and obtaining the "Best Project Award" for musical innovation confirmed by professionals.
- Engineered a hybrid architecture with advanced data pipelines and collaborative feedback loops, optimizing chord progression logic and prediction consistency.

CERTIFICATES

Full-Stack AI with Ollama: Llama, Deepseek, Mistral, QwQ

Python, Ollama, NLP, AI BOT

- Developed a full-stack AI chatbot platform using Python, Ollama, and state-of-the-art LLMs (Llama, Deepseek, Mistral, QwQ) for advanced NLP and conversational AI.
- Implemented RESTful APIs, robust authentication, and scalable data handling, delivering seamless user interactions and intelligent automation.

Master JavaScript from Basics to Advanced Fundamental JS, Advanced JS

- Gained in-depth knowledge of JavaScript, from core fundamentals to advanced topics, through hands-on learning with the "Master JavaScript from Basics to Advanced" course by EdYoda for Business & Qaifi Khan on Udemy.
- Strengthened my practical skills in developing interactive and efficient web applications, applying modern JavaScript techniques and best practices throughout real-world scenarios.

[<https://ude.my/UC-30e72ca3-efce-ef8-8ec-12c6809955d2>]

Master Tailwind CSS: Build 2 Advanced Projects

Tailwind CSS, Responsive Web Design, UI/UX, Frontend Development, Performance Optimization, Utility-first CSS, Modern Web Design

- Gained hands-on experience with Tailwind CSS, mastering responsive web design, utility-first CSS workflows, and modern frontend best practices.
- Built advanced, scalable web projects, demonstrating strong abilities in UI/UX principles, performance optimization, and creating visually appealing user interfaces.
