 Kathmandu

Profile

Full-stack engineer (**Node.js, React, MongoDB/PostgreSQL**) with **experience** shipping **5+** production web applications. Builds secure **RESTful APIs** with **JWT/RBAC authentication**, and automates **deployment** using **Docker, Kubernetes**, and **Jenkins CI/CD**. Works in **agile**, sprint-based environments.

Experience

SOFTWARE ENGINEER, Freelancer	11/2025 – Present Remote
- Shipped 5+ production web applications end-to-end for freelance clients, from API design to deployment — sustaining a 4-star average client rating. - Automated CI/CD pipelines and container orchestration (Jenkins, Kubernetes) for AWS-hosted applications, cutting deployment overhead and improving release reliability.	
FULL STACK ENGINEER (INTERN), MYPAY	07/2025 – 10/2025 Radhe Radhe, Bhaktapur
- Built a high-performance live streaming feature using Node.js, integrating third-party APIs to support real-time backend delivery at scale. - Implemented JWT-based authentication and role-based access control (RBAC) across full-stack applications, strengthening system security and reducing unauthorized access risk.	

Skills

Frontend & UI Libraries

React.js, Angular, Tailwind CSS, Daisy UI, Framer Motion

Backend & Databases

Node.js, Express.js, MongoDB, MySQL, PostgreSQL, Redis, RabbitMQ, NoSQL

Cloud & DevOps

Docker, Kubernetes (K8s), AWS (EC2, S3, Security Groups), Linux, CI/CD, Jenkins, Git/GitHub

Projects

MarketMandu (E-commerce) , Full-Stack Architecture

Angular, Node.js, Express.js, MongoDB, MySQL, AWS(S3, EC2), Docker, K8S, Jenkins, Nginx

- Designed a high-performance Node.js backend and Angular frontend for an e-commerce platform, implementing JWT authentication and role-based access control (RBAC) to secure core systems.
- Built modular RESTful APIs to streamline checkout and inventory management, following clean code principles across a hybrid MongoDB/MySQL data layer.
- Orchestrated deployment on Kubernetes and set up a Jenkins CI/CD pipeline, maintaining resilient performance under heavy traffic on AWS (EC2, S3).
- Configured Nginx as a reverse proxy for the platform, supporting automated deployment of the full high-traffic application stack.

Surakshya Cloud , *Cloud-Native Storage & DevOps*

Node.js, Express.js, Tailwind, EJS, DaisyUI, AWS(S3, EC2)

- Built the core platform and RESTful APIs using Node.js and Express.js, with EJS templating and Tailwind/DaisyUI to deliver a responsive, intuitive interface.
- Modernized the CI/CD pipeline with Jenkins and Docker containerization, incorporating Trivy vulnerability scanning as part of the security workflow.
- Deployed the platform on AWS (EC2, S3) with a Kubernetes cluster, maintaining high availability for distributed storage operations.
- Achieved a fully automated deployment pipeline from code commit to production, removing manual steps from the release process.

Movie Booking App , *Microservices & Event-Driven Architecture*

Node.js, MySQL, MongoDB, Docker, RabbitMQ, Sequelize, Mongoose, SQL, NOSQL

- Designed a modular Node.js backend with a hybrid SQL/NoSQL architecture, using Sequelize (MySQL) and Mongoose (MongoDB) to fit each service's data needs.
- Built event-driven microservices for Auth, Payment, and Reminder functions, using RabbitMQ for reliable message queuing between services.
- Reduced missed bookings by 25% by automating notification pipelines through the Reminder service's event-driven messaging.
- Containerized all services with Docker, enabling consistent, resilient deployment across the microservices architecture.

College Mangement System (CMS) , *Full-Stack & DevOps*

Node.js, Express.js, MongoDB, Mongoose, Tailwind, Cloudinary, Docker, Kubernetes, Jenkins, Nginx

- Designed a scalable backend architecture for a college management system, prioritizing secure handling of institutional data across student, faculty, and admin modules.
- Built RESTful APIs using Node.js and Express.js, with Mongoose/MongoDB for data modeling and Cloudinary for media storage.
- Automated CI/CD with Jenkins and deployed the application on Kubernetes, with Nginx handling reverse proxy and load distribution.
- Implemented secure code delivery practices across the pipeline, from development through production deployment.

Education

Bachelor of Engineering in Information Technology, *Everest Engineering College*

2021 – 05/2026

Affiliated with Pokhara University

Sanepa, Nepal

Intermediate (+2) in Science, *BVM Secondary School*

2018 – 2020

Kohalpur-15, Nepal
